## Summary

Full-Stack Software Engineer with 1+ years of experience across startups, building backend services, payment systems, and asynchronous processing infrastructure. Proficient in TypeScript, Node.js, PostgreSQL, Redis, and BullMQ, with experience in REST APIs, payment verification, credit ledgers, and RBAC. Experienced in owning features end to end and shipping production-ready solutions in fast-paced startup environments.

## Education

**Indian Institute of Information Technology, Jabalpur** — **Madhya Pradesh, India**
*Bachelor of Technology, CGPA: 7.9/10* — *2022 – 2026*

## Technical Skills

**Languages:** TypeScript, JavaScript, Python, Java, SQL
**Frontend:** React.js, Next.js, Zustand, TanStack Query, Tailwind CSS
**Backend:** Node.js, Express.js, FastAPI, REST APIs, BullMQ, Redis, Socket.IO, JWT, RBAC, Multi-Tenant Architecture
**Billing and Payments:** Payment Processing, Payment Verification, Idempotency, Credit Ledgers
**Databases:** PostgreSQL, MongoDB, Prisma ORM
**Cloud and Tools:** Amazon Web Services (AWS: EC2, S3), Docker, Git, Linux
**AI:** AI Agents, Retrieval-Augmented Generation (RAG), LangChain, OpenAI API, Embeddings, pgvector

## Experience

**Software Engineer** — **Jul 2026 – Sep 2026**
*Skyclad Ventures* — *Remote*

- **Payment Center:** Collaborated with the engineering team on end-to-end development of Payment Center across 20+ payment and configuration workflows; helped design 25+ backend APIs (authentication, RBAC, audit flows) and implemented secure payment flows with idempotency, session validation, and duplicate-payment prevention for the payer-side interface.
- **Payment Center:** Developed 30+ reusable React and TypeScript components, reducing repeated frontend effort and cutting integration issues by about 40% through standardized API contracts, validation rules, and error handling.
- **CRM Portal:** Built a multi-tenant AI CRM portal (Next.js, Node.js) with RAG-powered knowledge, website chat, lead capture and routing, appointment booking, WhatsApp automation, human handoff, and real-time dashboards.

**Software Engineering Intern** — **Dec 2025 – Jun 2026**
*Skyclad Ventures* — *Remote*

- Shipped features end to end with the product manager across backend APIs, background workers, and frontend (Node.js, TypeScript, PostgreSQL, Next.js, React) for a court E-Filing platform.
- **E-Filing:** Built backend services with one other developer: filing verification, filing management, profile, and authentication APIs covering 5+ filing lifecycle stages, document validation workflows, payment processing, and organization management.
- **E-Filing:** Secured the multi-tenant platform with JWT and refresh-token authentication and RBAC across 4 user roles, protecting sensitive filing and payment data.
- **E-Filing:** Owned the entire frontend from scratch (Next.js, Zustand, TanStack Query), including frontend validation and payer-facing interfaces.

**Software Engineering Intern** — **Jun 2025 – Aug 2025**
*Bloop* — *Remote*

- Owned the credit-based rewards system with the backend team (Python, FastAPI): credit allocation and redemption logic, plus redesigned accrual and redemption workflows that made transactions traceable and strengthened fraud prevention.
- Built and validated REST APIs with FastAPI and Pydantic (input validation, exception handling), and improved performance by 15% by optimizing API integration and removing unnecessary data processing.

## Projects

**Kairo – Visual Workflow Automation Platform** — **2026**
*TypeScript, Express.js, Redis, BullMQ, PostgreSQL, Razorpay, Socket.IO, Next.js, React Flow, Zustand*
Code: github.com/exorcist09/kairo-v2 | Live: kairoworkflow-landing.vercel.app

- Built the product end to end: PostgreSQL schema and migrations, authentication, REST APIs, a React Flow editor with live execution status (Socket.IO), and KAI, an AI agent that orchestrates workflow nodes and tools.
- Designed async execution on Redis and BullMQ workers with retries, error handling, and persisted state, keeping long jobs off the API path and concurrent runs consistent through database transactions.
- Implemented Razorpay credit billing with server-side payment verification, a credit ledger, and protected endpoints.

## Achievements and Leadership

- **Hackathons:** Placed 3rd (second runner-up) among approx. 1,400 participants with a team of 3 at Hackbyte, IIIT Jabalpur.
- **Programming Club, IIIT Jabalpur:** Mentored 40+ students in DSA workshops and contests.
- Solved 600+ problems on LeetCode and other platforms, demonstrating proficiency in data structures and algorithms.
